# Barcode App

Code available in learnIT

# Looking up a barcode

<https://www.upcdatabase.com/itemform.asp>

A screenshot of a web browser showing the 'UPC Database' website. The browser's address bar displays 'https://www.upcdatabase.com/itemform.asp'. The page has a header with the 'UPC DATABASE' logo and the URL 'www.upcdatabase.com'. Below the header, there are links for 'Barcode Database', 'UPC Code Barcode', and 'UPC Lookup'. The main content area is titled 'Item Lookup' and includes a section for 'Instructions' which explains how to enter a UPC code. At the bottom, there is a text input field for the UPC number and a 'Look Up UPC' button. The browser's taskbar at the top shows several open tabs, including '4-10 Apr 2016 - One.co...', 'A Short Introduction to Barc...', 'MIT App Inventor 2', '9780134171456 - Google...', and 'UPC Database: Item Loo...'. The browser's toolbar includes back, forward, search, and other navigation icons.

# Getting product info with the barcode

## Item Record

EAN/UCC-13

Description

Coriander ground

Size/Weight

30g

Issuing Country

Sweden

# Implicit and explicit intents

## Explicit (class name of activity to be started)

```
public void onClick(View view) {  
    // Start ListActivity  
    Intent i = new Intent(getActivity(), ListActivity.class);  
    startActivity(i);  
}
```

## Implicit (search for functionality)

```
Intent i = new Intent(Intent.ACTION_VIEW,  
    Uri.parse("http://www.itu.dk"));  
startActivity(i);
```

# Intent resolution

Intent resolution by the  
Android system

One activity is  
started

# Intent filters

Goes in manifest.xml file

```
<activity android:name=".BrowserActivitiy"
          android:label="@string/app_name">

  <intent-filter>
    <action android:name="android.intent.action.VIEW" />
    <category android:name="android.intent.category.DEFAULT" />
    <data android:scheme="http"/>
  </intent-filter>
</activity>
```

```
Intent intent = new Intent("com.google.zxing.client.android.SCAN");
intent.putExtra("SCAN_MODE", "PRODUCT_MODE");
startActivityForResult(intent, 0);
```

...

```
public void onActivityResult(int requestCode,
                             int resultCode, Intent intent) {
    if (requestCode == 0) {
        if (resultCode == RESULT_OK) {
            String contents = intent.getStringExtra("SCAN_RESULT");
            String format = intent.getStringExtra("SCAN_RESULT_FORMAT");
```

...

# Committing

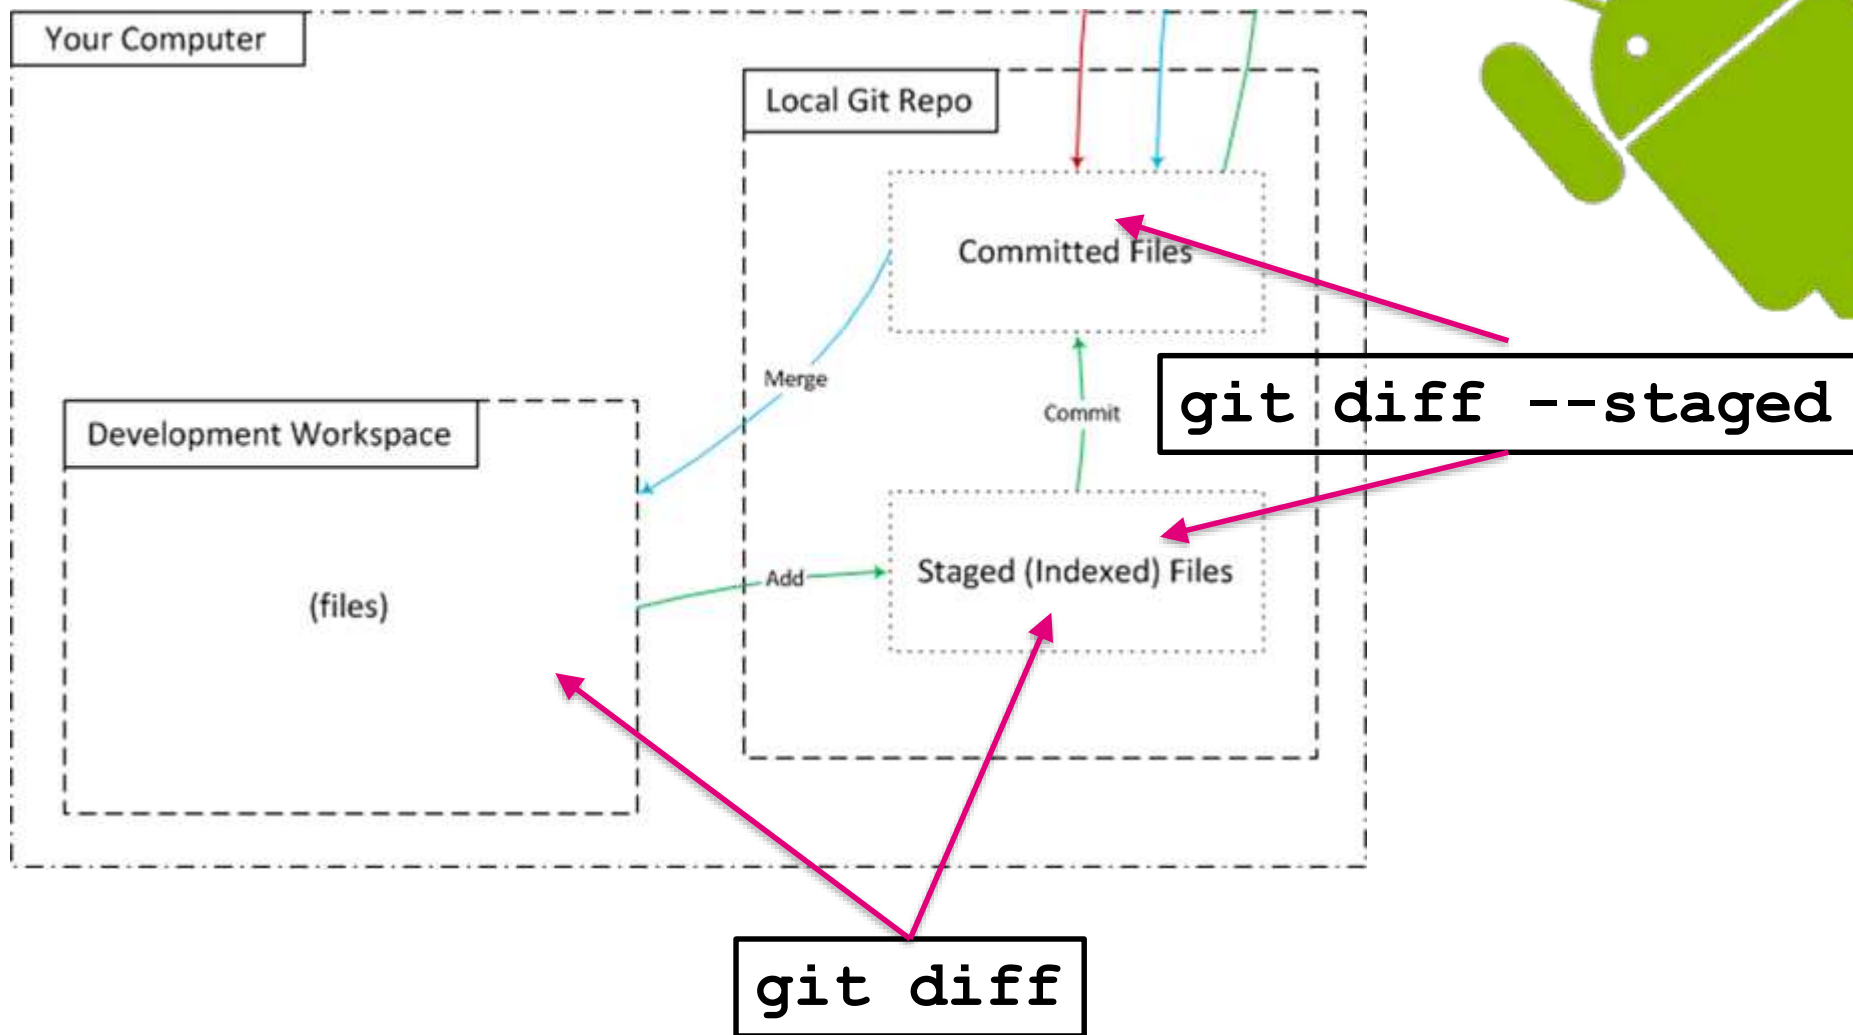

# Clone and merge

# File diffs

Two decisions:

- Use Git with command line tools or IDE (Android Studio)
- Use Git locally or with an external repository
- More GIT videos

<https://www.git-tower.com/learn/git/videos#episodes>

Download Git from here (Windows, Linux, Mac)
